atomcamp National AI Hackathon Finale: Participant Guide

Tuesday, October 20, 2026 | NIC Islamabad

Event overview

The finale takes place on **Tuesday, October 20, 2026 at NIC Islamabad**. Problem statements will be revealed on the day, and each team builds its solution on-site.

- **Teams:** 2 members per team. A 3rd team member is also welcome to participate, but must arrange their own travel and accommodation.
- **Build window:** on the event day only, from problem reveal to submission deadline
- **Deliverable:** a working, deployed Agentic AI solution plus a live presentation to the judges

Project requirements

Every submission must meet all five requirements below. Missing one costs heavily in scoring.

1. **Problem statement:** Build for the problem statement assigned on the day. Solve a real-world problem with a clear user and a clear outcome.
2. **Agentic AI:** The solution must use Agentic AI, autonomous agents, or multi-agent workflows. A simple chatbot or a single prompt-response app does not qualify. Agents should plan, use tools, and take actions.
3. **Deployment:** Deploy the solution on **Google Cloud Platform (GCP)**. Development should be done using **Google Antigravity**.
4. **Scalability:** Show how the project can grow into a scalable MVP and a market-ready product.
5. **Working demo:** The project must run live during the presentation. Slides alone are not a submission.

Resources provided

Each team receives **Google Cloud credits** and **OpenAI API keys** for development.

- Use them only for your hackathon project.
- Do not share keys with other teams or post them publicly (including in GitHub repos). Use environment variables.
- Credits and keys are limited. Monitor your usage so you don’t run out before your demo.
- Keys may be revoked after the event.

Presentation format

Each team gets **10 minutes in total**: 7 minutes to present and 3 minutes of Q&A with the judges. Timing is strict and the mic will be cut at the limit.

Segment	Time	What to cover
Presentation	7 min	Problem, solution, agent architecture, live demo, scalability and business potential
Judges’ Q&A	3 min	Answer technical and product questions from the judges

Suggested split for the 7 minutes:

- **1 min:** the problem and who it affects
- **1 min:** your solution and how the agents work together
- **3 min:** live demo of the working product
- **1 min:** tech stack and GCP deployment
- **1 min:** scalability, market potential, and next steps

All team members should be ready to answer questions about any part of the project.

Evaluation criteria

Judges score every project on five criteria. The judges’ decision is final.

Criterion	What judges look for
Innovation	A fresh approach, not a copy of an existing product
Functionality	The solution works end to end in the live demo
Scalability	A clear path from prototype to MVP to market-ready product
Real-world impact	Solves a genuine problem for real users in a measurable way
Technical execution	Quality of the agent design, code, and GCP deployment

Rules

- **All work happens on the event day.** Code, designs, and data pipelines must be created after the problem statement is revealed.
- **Open-source libraries, frameworks, and public APIs are allowed** (for example LangChain, LangGraph, CrewAI, Google ADK). Building on them is fine; copying someone else's full project is not.
- **AI coding assistants are allowed**, but your team must understand and be able to explain every part of the code.
- **Use a Git repository** and commit regularly. Judges may check the commit history to confirm the work was done on the day.
- **Only registered team members** (the 2 accommodated members, plus a 3rd member if attending on their own) may work on the project. No outside help from mentors, friends, or other teams on the code.
- **Report on time.** Teams must be present for check-in, the problem reveal, and their presentation slot.
- **Respect the venue,** the equipment, other teams, volunteers, and organizers at all times.
- **Follow organizers' instructions.** Any rule not covered here is decided by the organizing team.

Disqualification

A team will be **disqualified immediately**, without appeal, for any of the following:

1. Submitting ready-made code, a template project, or a previous project taken from anywhere else (GitHub, the internet, past hackathons, or another team).
2. Writing any project code or building any part of the solution before the problem statement is revealed.
3. Arguing with, disputing, or disrespecting the judges or their decisions.
4. Creating problems or disturbance for other teams, volunteers, or organizers.
5. Plagiarism, including copying another team's idea, code, or presentation.
6. Faking the demo: hardcoded outputs, pre-recorded results presented as live, or features shown that do not exist.
7. Being unable to explain your own code or architecture when questioned by the judges.
8. Misusing the provided cloud credits or API keys (for example sharing them, using them for other purposes, or abusing them).
9. Any form of cheating, harassment, or unethical behavior.
10. Having anyone outside your registered team work on the project, or replacing a registered member without organizer approval.
11. Missing the submission deadline or your presentation slot without informing organizers.

Submission checklist

Submit all of the following before the deadline announced on the day:

- ☐ Live deployed link on GCP
- ☐ GitHub repository link (public or shared with organizers) with a short README
- ☐ Presentation slides (PDF or link)
- ☐ Short architecture diagram showing your agents and how they interact
- ☐ Team name and all members' names

What to bring and prepare

- Laptops and chargers (bring an extension board if you can)
- A GCP account ready to use, and Google Antigravity installed and tested beforehand
- Your CNIC and student ID card
- A backup plan for the demo, such as a short screen recording made on the day, in case the internet fails
- Brush up on agent frameworks and GCP deployment (Cloud Run is the fastest route). Learning is allowed before the event; building is not.
